Apna Anantha Farming: Sustainable Herbal Agriculture and Natural Lemongrass Products

Introduction

Agriculture is increasingly moving toward sustainable cultivation, natural resources, and value-added agricultural products. Apna Anantha Farming Private Limited is working in this space by cultivating and processing herbal, aromatic, and agricultural products with a particular focus on lemongrass and moringa.

Based in Ranchi, Jharkhand, **Apna Anantha Farming** is engaged in the cultivation, processing, extraction, and marketing of herbal and aromatic products. The company aims to connect sustainable farming with practical, naturally derived products for consumers, businesses, and agricultural customers.

The company's product range includes lemongrass essential oil, lemongrass plants and slips, lemongrass-based floor cleaners, and other herbal agricultural products.

About Apna Anantha Farming

Apna Anantha Farming Private Limited is an agriculture-focused company working with aromatic, herbal, medicinal, and related agricultural products.

According to the company's website, its activities include cultivation of aromatic and herbal plants, extraction and distillation of essential oils, processing of agricultural products, and marketing of products obtained from these activities.

The company currently focuses on products associated with lemongrass and moringa, including lemongrass plants, lemongrass leaves, lemongrass oil, moringa leaves, moringa powder, and moringa seeds.

The company also states that it operates agricultural infrastructure supporting cultivation, irrigation, processing, and essential-oil extraction. Its farming operations are based in Jharkhand, an area where aromatic crops such as lemongrass can be cultivated successfully.

Lemongrass Cultivation and Processing

Lemongrass is an aromatic grass valued for its distinctive citrus fragrance and its use as a raw material for essential oil and other products.

At Apna Anantha Farming, lemongrass is cultivated and processed as part of an integrated agricultural model. The company describes its cultivation activities as involving land preparation, planting, irrigation, harvesting, storage, and steam distillation.

After harvesting, lemongrass can be prepared for the extraction process. Steam distillation is used to separate the aromatic oil from the plant material. The extracted oil is then collected and filtered for further use.

This type of agricultural value addition allows a crop to be converted into a higher-value product rather than being sold only as raw plant material.

Lemongrass Essential Oil

One of the key products associated with Apna Anantha Farming is **Lemon-e-Fresh Lemongrass Essential Oil**.

The company's online store currently lists lemongrass essential oil in different pack sizes, including 250 ml, 500 ml, 1 litre, and larger quantities.

Lemongrass essential oil has a fresh citrus-like aroma and is commonly associated with applications in home-care, personal-care, fragrance, and other product categories.

Apna Anantha Farming presents its lemongrass oil as a naturally derived product obtained from cultivated lemongrass through an extraction and distillation process.

Product information can be explored here:

Natural Lemongrass Floor Cleaner

Another product category offered by Apna Anantha Farming is the **Lemon-e-Fresh Lemongrass Floor Cleaner**.

The company's website lists the floor cleaner in several sizes, including 250 ml, 500 ml, 1 litre, 2 litre, and 5 litre options.

The product is positioned as a lemongrass-based cleaning solution with a refreshing fragrance. The company's information also describes the use of lemongrass oil in diluted cleaning applications.

For households and businesses looking for a cleaning product with a natural lemongrass fragrance, this provides an alternative category within the company's broader range of plant-based and agricultural products.

Lemongrass Plants and Slips

Apna Anantha Farming also offers lemongrass plants/slips for agricultural cultivation.

Lemongrass cultivation can be an attractive option for farmers interested in aromatic crops and value-added agricultural opportunities. Successful cultivation depends on factors such as soil conditions, irrigation, planting practices, climate, crop management, and harvesting.

The company provides information about lemongrass cultivation, including planting, irrigation, harvesting, yield, and oil extraction practices.

Farmers interested in lemongrass cultivation can learn more about the available planting material and agricultural products through the company's website.

Moringa and Herbal Agricultural Products

In addition to lemongrass, Apna Anantha Farming's business activities include moringa and other herbal agricultural products.

The company's website highlights products such as:

- Moringa green leaves
- Moringa leaf powder
- Moringa seeds
- Drumstick
- Lemongrass green leaves
- Dried lemongrass leaves
- Lemongrass oil
- Lemongrass plants

This combination of cultivation and processing allows the company to work across different stages of the agricultural value chain.

Focus on Sustainable Agriculture

Sustainable agriculture is becoming increasingly important as farmers, businesses, and consumers look for ways to make better use of natural resources.

Apna Anantha Farming's approach combines agricultural cultivation with processing and product development. The company describes its vision as becoming a recognized organization in sustainable herbal, aromatic, and medicinal agriculture while creating opportunities for rural communities.

Its farming infrastructure includes irrigation facilities and agricultural equipment, while its processing activities include essential-oil distillation.

Such an integrated approach can help create additional value from agricultural crops while supporting the development of rural agricultural businesses.

Why Explore Apna Anantha Farming Products?

There are several reasons why customers and agricultural buyers may want to explore the company's product range:

Agricultural Source:
The company is directly involved in cultivation and agricultural activities.

Lemongrass Specialization:
Lemongrass is one of the company's primary areas of focus, from cultivation to essential-oil extraction and finished products.

Multiple Product Categories:
The company offers essential oil, floor-cleaning products, and lemongrass planting material, along with other herbal agricultural products.

Value Addition:
The business combines farming with processing and product development.

Sustainable Agriculture Focus:
The company promotes sustainable farming and responsible use of agricultural resources as part of its long-term vision.

Conclusion

Apna Anantha Farming Private Limited represents an agricultural business model that combines cultivation, processing, and marketing of herbal and aromatic products.

With lemongrass at the center of several of its activities, the company works across cultivation, essential-oil extraction, planting material, and finished consumer products such as lemongrass floor cleaner. Its wider agricultural interests also include moringa and other herbal products.

For customers, farmers, distributors, and businesses interested in herbal agricultural products, lemongrass essential oil, lemongrass plants, and natural product solutions, Apna Anantha Farming provides an online platform to learn about its company and explore its available products.
